|----------------------------------------------------------------|-------------------------------------|
| <b>Cognizant Technologies</b><br><i>Senior Manager Support</i> | Texas, USA<br>June 2025 - June 2026 |
|----------------------------------------------------------------|-------------------------------------|

- Lead and manage technical support operations as a Senior Manager, Drive systemic improvements by streamlining issue resolution workflows and architecting robust support frameworks, including incident response protocols, SLA governance, and change management.
- Spearhead cross-functional LinOS initiatives to scale support capabilities across AAPI, WMS, WCS, and Data Science teams.

- Serve as the primary liaison for critical L2 escalations, facilitating seamless coordination between Engineering, Product, and Support teams to ensure rapid resolution.
- Utilize advanced metrics and trend analysis to guide continuous improvement and advocate for roadmap priorities rooted in customer insights and post-incident learnings.
- Acting as a dedicated voice of the customer to ensure platform decisions and technical strategies maximize long-term satisfaction and stability.
- Integrated and processed billing data from multiple sources including **AWS, Linux, Data Science, LLMs, Agentic AI and SQL**, handling various file formats like **JSON, CSV, and XML**.
- Manage and mentor onshore and offshore support engineers, team of 22 people, championing the adoption of automation and self-service innovations to optimize operational efficiency.
- Maintain SLA compliance across all support engagements by delivering root cause analyses (RCAs) and KPI-based performance tracking.
- Set up and manage a 24\*7 Technical Center (including holidays and weekends) through recruitment, process design, and coordination with senior leadership and clients.
- Utilize tools and technologies such as **Python, Java, REST APIs, SQL, Splunk, and AWS** to enhance support delivery and automation.

## HERE Technologies

*Principal Support Engineer*

Gurgaon, India

*May 2021 – June 2025*

- Lead and manage technical support operations as a Principal Support Engineer, ensuring timely analysis, testing, and debugging of software issues reported by clients.
- Coordinate structured escalation handling by assessing impact and criticality, engaging SWAT teams, and aligning with cross-functional leads to drive resolution.
- Provide end-to-end incident management with a focus on executive visibility and actionable resolution tracking.
- Integrated and processed billing data from multiple sources including **AWS, Azure, GCP, Agentic AI, and SQL**, handling various file formats like **JSON, CSV, and XML**.
- Deliver technical consulting and training to clients, helping them leverage HERE's technical capabilities and maximize platform value.
- Manage a support team of six engineers handling technical operations for ten major automobiles clients in the US, EMEA, APAC and Indian market.
- Maintain SLA compliance across all support engagements by delivering root cause analyses (RCAs) and KPI-based performance tracking.
- Set up and manage a 12x7 Technical Center (including holidays and weekends) through recruitment, process design, and coordination with senior leadership and clients.
- Utilize tools and technologies such as **Python, Java, REST APIs, SQL, Splunk, and AWS** to enhance support delivery and automation.
- Actively participate in HERE's technical community by contributing to blogs, whitepapers, and technical sessions, and maintain collaborative relationships with internal product groups and engineering teams.

## Cvent India

*Manager Application Support*

Sept 2019 - May 2021

*Gurgaon, India*

- Led a team of 20 application support engineers, overseeing performance reviews, quality audits, and productivity tracking through KPIs.
- Provided technical guidance and hands-on support for high-priority incidents involving REST APIs, AWS, Java, Python, SQL, and NoSQL databases.
- Designed and implemented an API service using **Python** and **Apache Airflow** to dynamically generate DAGs, enhancing pipeline scheduling and reducing manual effort by 80%.
- Developed a microservice with **FastAPI**, deployed on **Kubernetes**, to push real-time processing status messages to a **Kafka** broker.
- Managed escalations and ensured SLA compliance through effective incident management, root cause analysis (RCA), and stakeholder reporting using Splunk, DataDog, and New Relic.
- Led support coordination for two major enterprise events across the US and Europe, serving as the sole management contact during both 10-day events.
- Actively contributed to recruitment, conducted monthly 1:1s with team members, and participated in quarterly reviews with leadership to align support goals.
- Participated in architectural discussions and proposed process enhancements to improve system stability and operational efficiency.

## Edifecs

March 2014 - Sept 2019

*Senior Consultant*

*Mohali, India*

- Provided end-to-end technical support for enterprise healthcare applications in both hosted and on-premise environments, ensuring compliance with HIPAA standards.
- Diagnosed and resolved issues related to Windows-based applications, file transfers, networking, and database access across UNIX and Windows platforms.
- Specialized in Incident, Change, and Problem Management using tools like **MS SQL, and scripting languages including COM, JScript, Java and Groovy.**
- Installed, upgraded, and troubleshoot applications like Encounter Management, while delivering internal technical training sessions to peers and clients.
- Independently managed support for five US-based clients, including handling escalations, SLA reporting, and ensuring a seamless customer experience.
- Prepared monthly reports with KPIs and led new initiatives such as the internal rollout of the Encounter Management system.
- Spearheaded the migration of two major clients from the Professional Support team to the Technical Support team with zero external dependencies.
- Worked onsite in the **United States for 1 year from 2015 to 2016** to provide direct client support, gather feedback, and drive operational excellence.

## Torus Insurance

Nov 2011 - March 2014

*Application Support Analyst*

*Gurugram, India*

- Provided technical support for EMR, Billing, and Practice Management software in both hosted and on-premise environments.
- Troubleshoot issues related to Microsoft Operating Systems, SQL databases, networking, and file transfers to ensure smooth application functionality.
- Installed, upgraded, and resolved issues in enterprise software such as ClaimCenter and Opus deployed on Windows and Linux servers.
- Maintained SLA compliance for all support tickets, including high-priority incidents, and conducted thorough root cause analysis (RCA) with stakeholder communication.
- Collaborated with clients, internal teams, and IT staff to analyze trends in support requests and improve system reliability.
- Performed SQL queries, monitored cron jobs, and managed incident, change, and problem processes using ITSM best practices.
- Delivered end-user and super-user training and created detailed technical documentation to support project implementation and maintenance.
- Acquired and applied in-depth knowledge of the UK Insurance Industry to enhance client engagement and ensure SLA adherence.

## Global Logic

June 2010 - Nov 2011

*Senior Product Support Engineer*

*Noida, India*

- Provided **L2 technical support** for Telecom Expense Management systems, including debugging and resolving both custom and base code issues.
- Deployed new software builds to client environments and ensured smooth integration tailored to customer-specific configurations.
- Collaborated with clients, quality engineering, and development teams to gather requirements, deliver fixes, and align with project timelines.
- Followed standard case management procedures and ensured SLA compliance through responsive and effective communication.
- Enhanced technical proficiency in **SQL, Java, AWS, JavaScript, Groovy, Linux, Unix, and** while troubleshooting complex product issues.
- Successfully achieved quality and productivity performance goals and contributed to team learning through knowledge-sharing sessions.

## Xchanging India

Nov 2008 - June 2010

*Support Analyst*

*Gurugram, India*

- Provided technical support to enterprise clients, addressing both technical and operational aspects through advanced troubleshooting and provisioning activities.
- Collaborated with Product Support teams and management to ensure quality case resolution and a consistent, responsive customer experience.
- Handled 12x7 support operations in **the UK Insurance domain**, ensuring smooth knowledge transfer from UK teams to the India office.
- Maintained adherence to operational procedures in case management, change management, and incident/problem management.
- Strengthened expertise in **Java, Advanced Java, SQL, Linux, C, and C++** while supporting complex production issues.
- Facilitated onboarding and continuous learning by conducting training sessions for new recruits and existing support team members.
- Achieved all quality and productivity performance goals through disciplined process execution and collaboration.

## Fidelity India

July 2006 - June 2008

*Associate Software Engineer*

*Gurugram, India*

- Provided comprehensive technical support to enterprise clients, addressing both technical and operational issues through advanced troubleshooting and research.
- Collaborated with product support teams and management to ensure quality resolutions and a consistent, responsive customer experience.
- Delivered **24x7 production support services** leveraging tools and technologies such as **Control M, Data Warehouse, Java, Linux, and SQL**.
- Adhered to standard procedures for case and incident management, ensuring accuracy and efficiency in issue resolution.
- Focused on continuous improvement in troubleshooting, product knowledge, and technical skills while supporting peer development.
- Successfully met quality and productivity targets through disciplined process adherence and proactive problem-solving.
